and an autopilot function having a download instruction registered therein, a user of the information automatically acquiring the secondary information made public on the web site using the identification codes transmitted together with the primary information.

REMARKS

Claims 1-12 are in the application. New claim 12 has been added. The new claim highlights the combination of features according to the systems of the invention including the feature of an autopilot function having a download instruction registered therein. As described for example in the application at page 7, lines 2-4. Favorable consideration of all the claims is requested.

Applicant requests that the Examiner consider prior art references and discussions as to relevancy of references which have come to Applicant's attention from the Japanese Examination Procedure. Applicant attaches hereto three prior art publications including translations of pertinent passages. Applicant is submitting both a copy of the prior art reference along with a marked-up copy of the reference indicating the text of the partial translations.

The publication from "Contents Design" labeled prior art (1) makes reference to keyword searching and other search functions where one can jump to any recommended sites at the text portion labeled reference a (top of page 94 of the reference). At the reference portion b translated it is noted that this popular web search site indicates operation features as to sites including changing specific categories responding to request by reply mails and using

particular code searching functions shared between a magazine and a web site.

The prior art publication "New Products Review NetRecorder 5" includes several passages which have been translated as shown on the attached sheets. The passages describe several features of the web page recording product. The NetRecorder uses internet explorer settings and netscape communicator settings. NetRecorder 5 is also discussed with recording functions.

The prior art document labeled prior art 3 from "All That New Software Internet Ninja 4 for Windows" includes translated portions as shown on the attached. The system allows links to be collected or researched by clicking on data. It also allows a user to store favorite web pages in a PC. The system also has a timing feature for automatically making rounds of web pages at predetermined times.

Consideration of the references including the translated text portions is requested.

Respectfully submitted
for Applicant,
